

CHIPBLASTER WASH WAND

Preventative maintenance is a must to protect your CNC machine tool investment. When scheduled preventative maintenance occurs, your machine tool performs at peak performance and increases your machine tool lifespan.

Adding a Chipblaster Wash Wand to your preventative maintenance process provides a quick and efficient method to clean unwanted chips out of lathes and milling machines.

PERIPHERAL VISION

For CNC machine tool peripherals, it's LNS, then all the rest

Preventive Maintenance Operator Convenience

Quickly remove chips from a lathe or milling machine. Installing an LNS Chipblaster Wash Wand is the perfect solution to effortlessly wash away chips from inside the machine table, fixtures, walls, and way covers. This accessory is universal and can be mounted on any machine tool.

Installation Kit Includes:

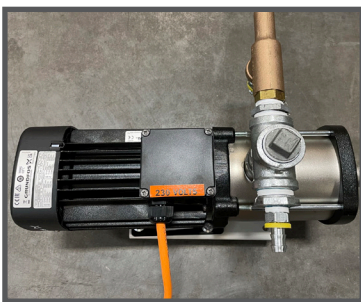

- Pump Assembly
- Suction Hose
- Nozzle Gun with Hose
- Magnetic Gun Holder
- Pendant station
- Electrical Assembly
- Electrical Connection kit
- Suction Standpipe
- Sump Return with Hose

Magnetic gun holder allows you to easily place the nozzle gun on a surface convenient to the operator's workstation.

Magnetic pendant station allows you to easily place the control on a surface convenient to the operator's workstation to turn pump on and off.

Priming the pump is simply achieved by removing the plug from the "T" and filling the pump with coolant from the tank.

PERIPHERAL VISION

Peripherals, by definition, are an outer boundary. But at LNS, that boundary is where we put our focus. Because here's the secret—with LNS peripherals on your side, you can turn your attention to what you do best—making chips and making money.

That's why we do what we do. Five product categories and industry-best expertise means no company on earth can match the passion and vision we have for machine tool peripherals.
